&
Support

Staffing

Our salesforce experts with extensive experience ensure the custom devised salesforce solution is executed in an effective and efficient manner. For your convenience, we offer two forms of implementation: Full and Quick Start.

Full Implementation:

During a Full implementation, our experts collaborate with your team to decipher the specific goals of your business. We then devise and carry out a plan that's fully customized to your company.

Quick Start Implementation:

Quick Start implementation is ideal for budget-conscious firms who need Salesforce up and functioning as soon as possible. As such, the scope is fixed.

An implementation can include several key features:

- User and organization setup
- Pipeline management (leads, accounts, opportunities, contracts, orders, etc.)
- CPQ (configure, price, quote) configuration
- Data import and migration
- Reports and dashboards
- Forecasting
- Training and adoption

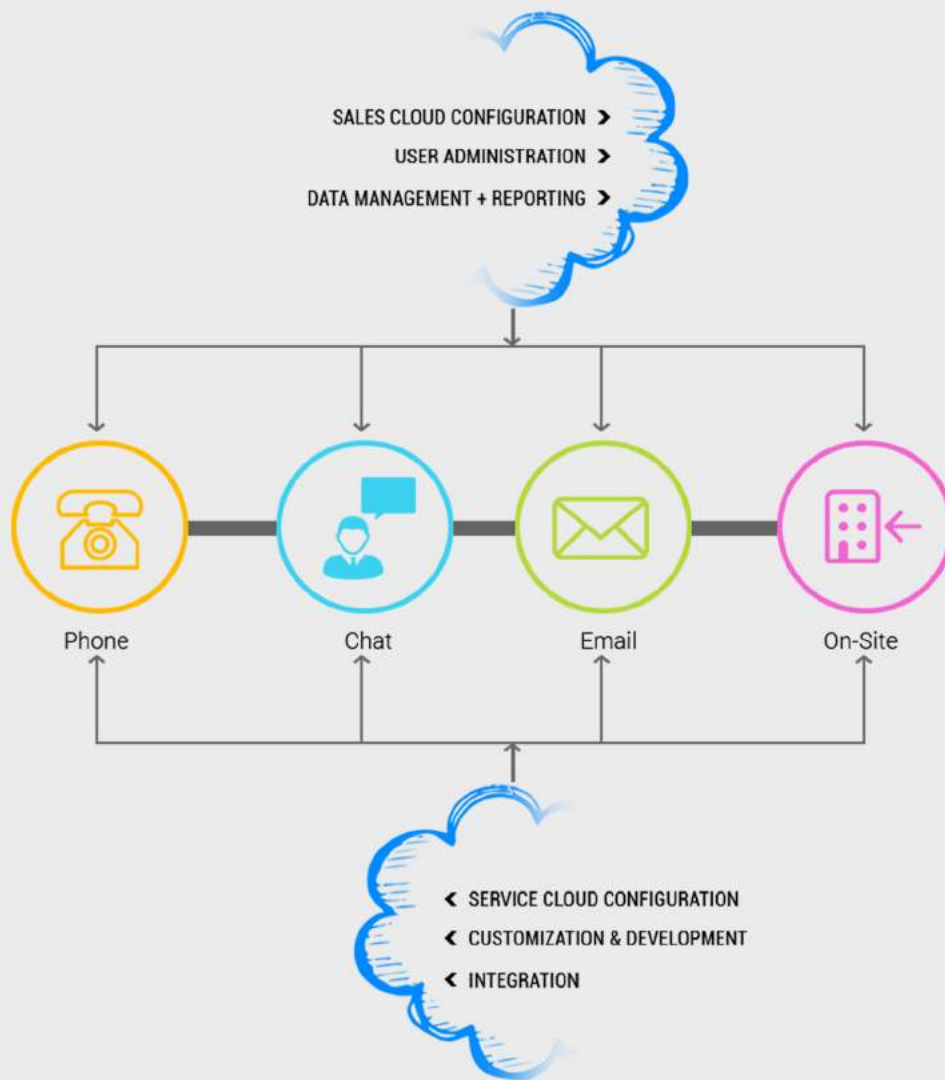

DEVELOPMENT SERVICES

Our team of developers led by industry experts are well-versed in all development aspects of Salesforce and Force.com. We work with an agile model that's proven to produce quick results and lower overall costs. In addition, once a development project is completed, our team will be available to support you with new features and training and provide production deployment assistance.

We offer a wide range of Force.com development services: We also work with several supported Salesforce platform technologies including Salesforce Mobile (implementation and development), Salesforce AppExchange (application development and support), Heroku Enterprise (application development), Salesforce Lightning, and Site.com.

- Development of Visualforce web pages (custom pages within the Salesforce interface)
- Creation of Apex triggers
- Modification of existing Apex/Visualforce Code
- Apex web services
- Scheduled/batch Apex
- More customised services depending on your Salesforce needs

ADMINISTRATION & SUPPORT SERVICES

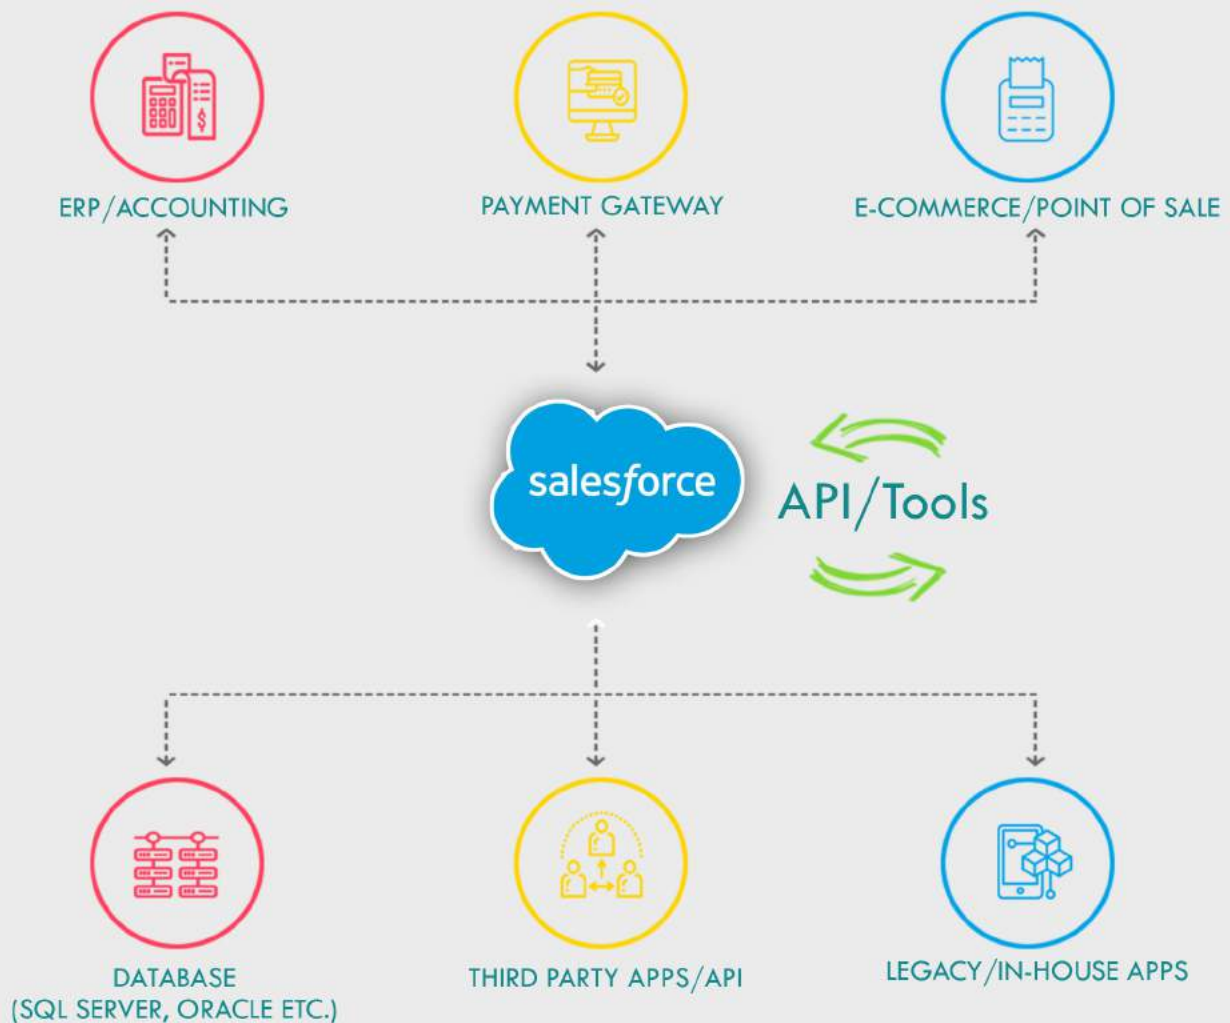

Admin and Support

As a part of what we do, imparting our Salesforce knowledge onto your team is inevitable. However, there may be times when you're in need of our assistance. We understand that your business needs may change over time and we will be happy to help your company scale greater heights.

Our certified Salesforce consultants, administrators, and developers are always eager and willing to answer questions and provide insight.

INTEGRATION

Our Application integration provides a unified view of multiple business applications or of new and legacy systems. Here are some examples of programs we've integrated with Salesforce:

- ERP Software
- Accounting Software
- Payment Gateways
- e-Commerce/Point of Sale (POS)
- Database (SQL Server, Oracle, etc.)
- 3rd Party Apps/APIs
- Legacy Applications

Staffing Services

You can enlist the help of our certified Salesforce specialists whenever there is a need for one in your company. We have a team of certified and experienced Salesforce consultants, developers and administrators available for short and/or long-term onsite engagements.

Remote Admin

A dedicated/shared admin ensures the responsive support and maintenance of your Salesforce instances and are able to handle all of your routine Salesforce administration needs including:

- Basic system administration tasks including adding, removing, and changing your users, permissions and passwords
- User assistance, training and support
- Understand user needs and make requested changes, which may encompass Workflows, UI/Layouts, Custom Fields, Objects, Applications and Process Builder
- Data migration and cleansing
- Reports and dashboards
- AppExchange package installation and maintenance

Remote Developer

If your company has Salesforce development and coding needs, we equip you with the perfect remote developer for you.

- Basic development tasks (custom applications, objects, fields, buttons, etc.)
- Development tasks that require coding (Visualforce pages, Apex Classes, Triggers, etc.)
- Advanced development (Working on AppExchange product development tasks, Schedule Apex, Batch Apex, Lightning Components, Apex services, API integration with external systems)
- Payment Gateway integration
- Email integration
- Visualforce pages

Mobile App Development

Mobile Consulting

We provide professional mobile consulting and business analysis to analyze your needs and elicit requirements, define and prioritize features, as well as plan out the solution architecture and conduct usability testing.

Mobile App Design

Our mobile UI/UX design specialists create a conversion-driven mobile user experience that makes for high conversion and user retention.

Mobile App Development

We welcome all types of mobile app implementation – from website-to-app conversion to original concept realization; from refactoring of your existing code to blank-slate app development. We offer native mobile development for iOS, Android, Windows Phone and cross-platform/hybrid development.

Backend Development

Our team of backend developers creates robust, secure back ends and provides their integration with an app (or apps) or with any third-party systems of your choice.

Mobile App QA and Support

Our mobile testing experts perform all types of mobile testing and debugging to ensure the high quality of your mobile solution.

Mobile App Evolution

We are always willing to help your app grow by fine-tuning it, expanding its functionality according to your roadmap, and introducing cutting-edge mobile experiences to keep your users continuously engaged.

JAVA DEVELOPMENT

Our Java software development services are meant to offer full support to clients and businesses across the globe, starting from choosing the apt architecture to custom Java development, migration, upgrade, maintenance and support and more.

Product Engineering / Development

Utilize extensive Java web services comprising custom product development while using the latest technology trends including Grails framework, Struts, Spring, Hibernate, Liferay, Bigdata, Hadoop, and EJB.

Enterprise Java Development

Invest in enterprise Java development to get reliable, scalable, and secure enterprise-grade applications that are tailored to address the most sophisticated business requirements.

Java Maintenance and Support

Dependable yet cost-effective Java maintenance and support services that empower applications to run seamlessly for achieving business goals and deriving continuous value from the existing infrastructure.

Java Web Development

End-to-end Java web application development services to create agile, secure, and scalable websites for diverse business segments including banking, healthcare, retail, and more.

Java/J2EE Development

Collaborate with seasoned Java programmers who offer best-in-class Java/J2EE development services that are suitable for mobile as well as web app requirements of businesses.

Java Migration

Migrate seamlessly from traditional web platforms to the latest Java Technology for enhancing the speed, security, reliability, and cross platform capabilities of your business application.

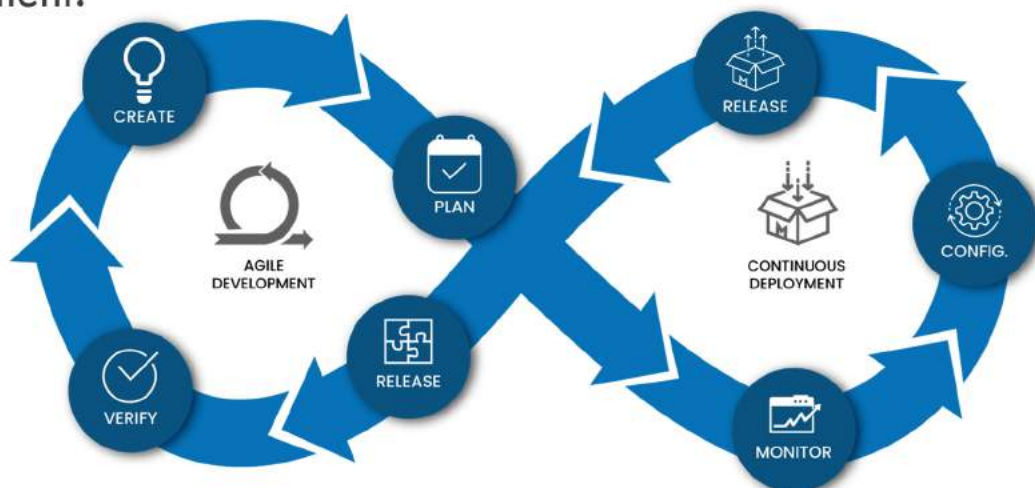

BUILD & RELEASE

We at C2N believe in expeditious delivery of services.

We achieve this by using automation and cutting-edge technologies to develop client-oriented solutions. Our AWS certified engineers and DevOps experts help clients to improve the build, release and deployment of application using the right approach. Using DevOps our team enhances the productivity by upscaling a number of challenges that majority of enterprises are facing.

DevOps eliminates all the said challenges by bridging the gap between core operating teams. In this new service culture by using DevOps the interaction link between the development (Dev) and operations (Ops) teams. The timely delay is removed by using cloud computing and sophisticated tools supporting automation and hence a fast-paced cycle is achieved. Our DevOps engineers have a profound view on both development and operations and our SRMs have a hawk eye view on the entire process at any given point of time.

We help our clients in adopting DevOps at every stage of the application development.
